

## ANTI-BLINDING RODS

Anti-Blinding Rods are elastic polyurethane rods that are fixed to the screenbox and have been developed to improve the cleanliness of any screening media. Anti-Blinding Rods use the machine's vibration to bounce on the surface of the media and help to decrease pegging and blinding. The other major benefit is that they help disburse the product evenly across the entire screening media. They can be connected in multiple parts to completely cover the screen area.

### BENEFITS:

- Self-cleaning properties
- Larger screening area
- Longer service life
- Easy to install
- High efficiency
- Highly resistant to abrasion, wear & tear and corrosion
- Reduced cleaning downtimes
- Wide range of applications
- Various customized size options

Available in:

**250gm HD Orange Hammers**

**170gm LD Blue Hammers**
